

GUJARAT TECHNOLOGICAL UNIVERSITY

B. E. SEMESTER: VI

Electrical & Electronics Engineering

Subject Name: **Integrated Circuits & Application**

Subject Code: **160801**

Teaching Scheme				Evaluation Scheme		
Theory	Tutorial	Practical	Total	University Exam (Theory) (E)	Mid Sem Exam (Theory) (M)	Practical (I)

Sr. No	Course Content	Total Hrs.
1.	Introduction to Operational Amplifiers: Introduction, Block diagram representation of a typical op-amp, its equivalent circuit, types of ICs, Manufacturers' designations and package types for ICs, Power supplies for ICs.	3
2.	Interpretation of Data Sheets and Characteristics of an op-amp: Interpreting datasheet, Ideal Op-amp, Equivalent circuit of an op-amp, Ideal voltage transfer curve, Open-loop op-amp configurations.	3
3.	An Op-amp with Negative Feedback: Voltage-series feedback amplifier, Voltage-shunt feedback amplifier, Differential amplifier.	3
4.	The Practical Op-amp: Introduction, Input offset voltage, Input bias current, Input offset current, Total output offset voltage, Thermal drift, Effect of variation in power supply voltage on offset voltage, Change in input offset voltage and input offset current with time, Other op-amp parameters which changes with change in temperature and supply voltage, noise, Common-mode configuration and common-mode rejection ratio, Slew rate and its equations, Effect of slew rate in applications, Difference between bandwidth, Transient response and slew rate.	6
5.	General Linear Applications: DC and AC amplifiers, AC amplifiers with single supply voltage, Peaking amplifier, Summing, Scaling and Averaging amplifier, Instrumentation amplifier - its block diagram along with applications, Differential input and differential output amplifier, Voltage-to-current converter with floating load	6

	(low-voltage DC voltmeter, low-voltage AC voltmeter, Diode match finder, Zener diode tester, Light-emitting diode tester), Current-to-voltage converter, Very high-input impedance circuit, Integrator, Differentiator.	
6.	Comparators and Converters: Comparator, Zero Crossing Detector, Schmitt Trigger, Voltage limiters, Clipper and clampers, Absolute value output circuit, Peak detector, Sample and hold Circuit, Precision rectifier – Half/Full Wave, Square, Triangular and Saw tooth Wave Generator, Log/ Antilog Amplifier.	6
7.	Specialized IC Applications: a. 555 Timer and its Applications: Block Diagram, Monostable and Astable Multivibrator, Applications as Frequency Divider, Square Wave Generator. b. Free-Running Ramp Generator c. Phase Locked Loop and Its Applications: Block Diagram and Operation, Applications as Frequency Multiplier, Frequency Shift Keying.	6

List of experiments with emphasis on test kits and breadboard implementation for the following circuits (Minimum 10).

1. Measurement of input and output offset voltage of 741 ICs.
2. To configure op-amp in voltage follower mode and to measure its slew rate.
3. To configure op-amp in inverting and non-inverting amplifier mode and measure their gain and bandwidth.
4. To prepare precision rectifier using op-amp and verify its operation using measurements.
5. To prepare full-wave rectifier using op-amp and verify its operation using measurements.
6. To measure PSRR and CMRR of given op-amp.
7. To design Schmitt trigger circuit using op-amp and take measurements.
8. To design, build astable and monostable multi-vibrators using 741 IC and verify their operation using measurements by observing waveforms.
9. To design triangular wave generator using op-amp and verify its operations with measurements.
10. To design monostable and astable multi-vibrators using 555 timer IC and verify their operation using measurements.
