B.E. SEMESTER : VIII

MECHATRONICS ENGINEERING

Subject Name: **Project - II**

A Mechatronics project is expected to be a synergic combination of mechanical engineering, electronics control and/or software development. The project should involve basic design, procurement and manufacture of components, simulation, subassembly testing, and prototype testing and software development.

Project – II may be a continuation of Project – I or a new Project. The work involved will include manufacture / procurement of necessary parts, assembly, testing and software development. It will culminate in a Final Project Report and defense of the work done.
